Working with text

- ▶ Real nightmare
- ▶ Lot of data (e.g. books, chats, tweets, etc.)
- ▶ Number of languages \sim 6500
- ▶ Number of really spoken languages?
 - ▶ According to Wikipedia 100th language has 7.5million native speakers
 - ▶ Wikipedia with at least 100 pages: 282 languages
- ▶ Writing: left to right, right to left, symbols (Chinese)

Encoding text

- ▶ ASCII table: American Standard Code for Information Interchange
- ▶ 8 bit: 256 different possibilities

Encoding text

- ▶ ASCII table: American Standard Code for Information Interchange
- ▶ 8 bit: 256 different possibilities
- ▶ Latin-1: ä,ö,ü,û,à
- ▶ Latin-2: á,ó,Û,í
- ▶ Unicode: 16 bit characters → died before it could live, but still exists!
- ▶ Encoding: utf-8: Special characters:

Lucky world

- ▶ English is just the perfect choice
- ▶ Short words
- ▶ No fusion or hardly any conjugation
- ▶ Very few letters, and all are available as simple ascii

Make the computer understand the text

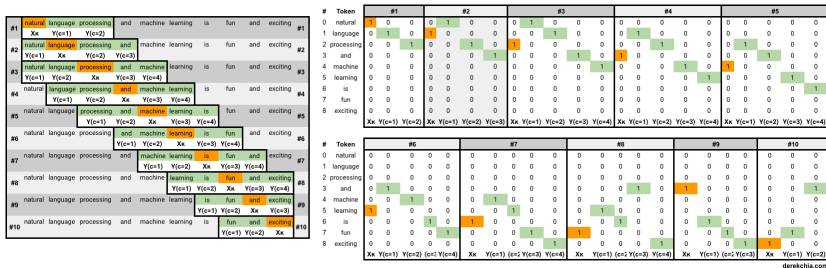

- ▶ Analyze the word (problems with same form) e.g. leaves (what trees have and what someone does at the end of the class)
- ▶ Get meaning → stem
- ▶ Always use purpose made tool on you own language (hunmorph for Hungarian)

```
echo "alkalmatlanok" | ./src/wrappers/ocamorph/ocamorph
--aff ../morphdb.hu/morphdb_hu.aff \
--dic ../morphdb.hu/morphdb_hu.dic
> alkalmatlanok
alkalmatlan/NOUN<PLUR>
alkalmatlan/ADJ<PLUR>
alkalom/NOUN [NEG_ATTRIB] /ADJ<PLUR>
alkalom/NOUN [NEG_ATTRIB] /ADJ<PLUR>
```

Words to vector

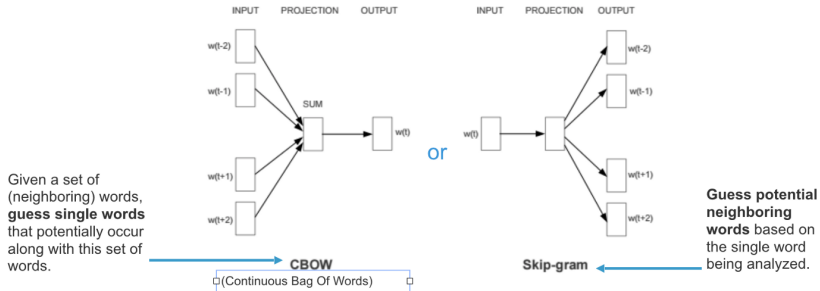

Mikolov et al. 2013

- ▶ Try to predict parts of text
- ▶ Take sentences
- ▶ consider 5 word grams
- ▶ encode them using one hot encoding

Words prediction

- ▶ Word is determined by neighboring word and of course context.
- ▶ Two way of guessing

Encoding

- ▶ Set of words
- ▶ Extra words at end of sentence extra encoding

Word similarity

- ▶ If we have only single layer of neurons
- ▶ We can find similar word which have the most similar weights

Given a set of (neighboring) words, **guess single words** that potentially occur along with this set of words.

OR

Guess potential neighboring words based on the single word being analyzed.
